

Harry Kalyvas
CEO FOUNDER
clip&talk

future & now
of the
HEALTH INDUSTRY
is

REMOTE PATIENT MONITORING & CONNECTED HEALTH

a **revolution**

in

remote

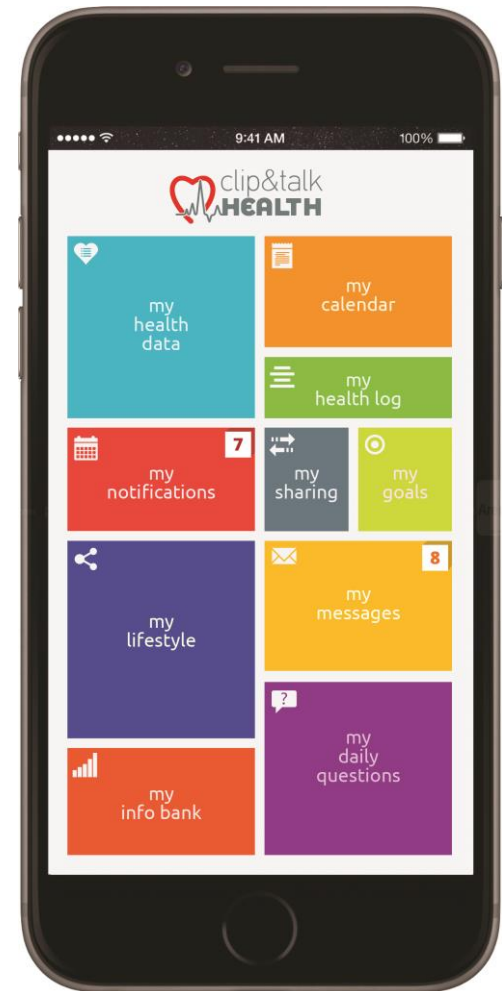

health

monitoring

&

health data

aggregation

a wise old saying

“prevention
is better than **cure”**

in order to **“prevent”** every day **“healthy people”** need to have their
health monitored and reviewed **daily**

**“when was the last time you
checked up on your health...?”**

people with **chronic diseases** are in **dire** need of **regular daily monitoring** when they are released from the healthcare facility

unfortunately effective regular daily monitoring is **not available** in the patients

home or work place resulting in patients re-entering & utilizing the healthcare facility more often than they should

find a **way** to receive
health data

at regular daily intervals from
healthy people and
people with chronic diseases
and you will find many **ways** to
prevent, save, treat, cure
and
ultimately
improve quality of life

the **healthcare industry** world wide is in **crisis**

- **growing number** of the **elderly population**
(massive demographic shift)
- **growing number** of **chronic disease patients**
- **exponential escalation** in **healthcare costs**

the **only solution** is to **monitor, manage & prevent** - **reducing** the **need for general healthcare services & applying healthcare resources more productively where actually needed**

\$2.9
Trillion

annual health care expenditures on
hospital care and clinical services in
the USA*

monitor, manage & prevent
=
IMPROVING/SAVING LIVES
& BILLIONS OF SAVINGS IN
HEALTH CARE EXPENDITURES

clip&talk **Health** has re-invented the way we will monitor our HEALTH & WELLNESS

in ear patented & clinically validated

re-invention of the bluetooth with patented clip on & other features

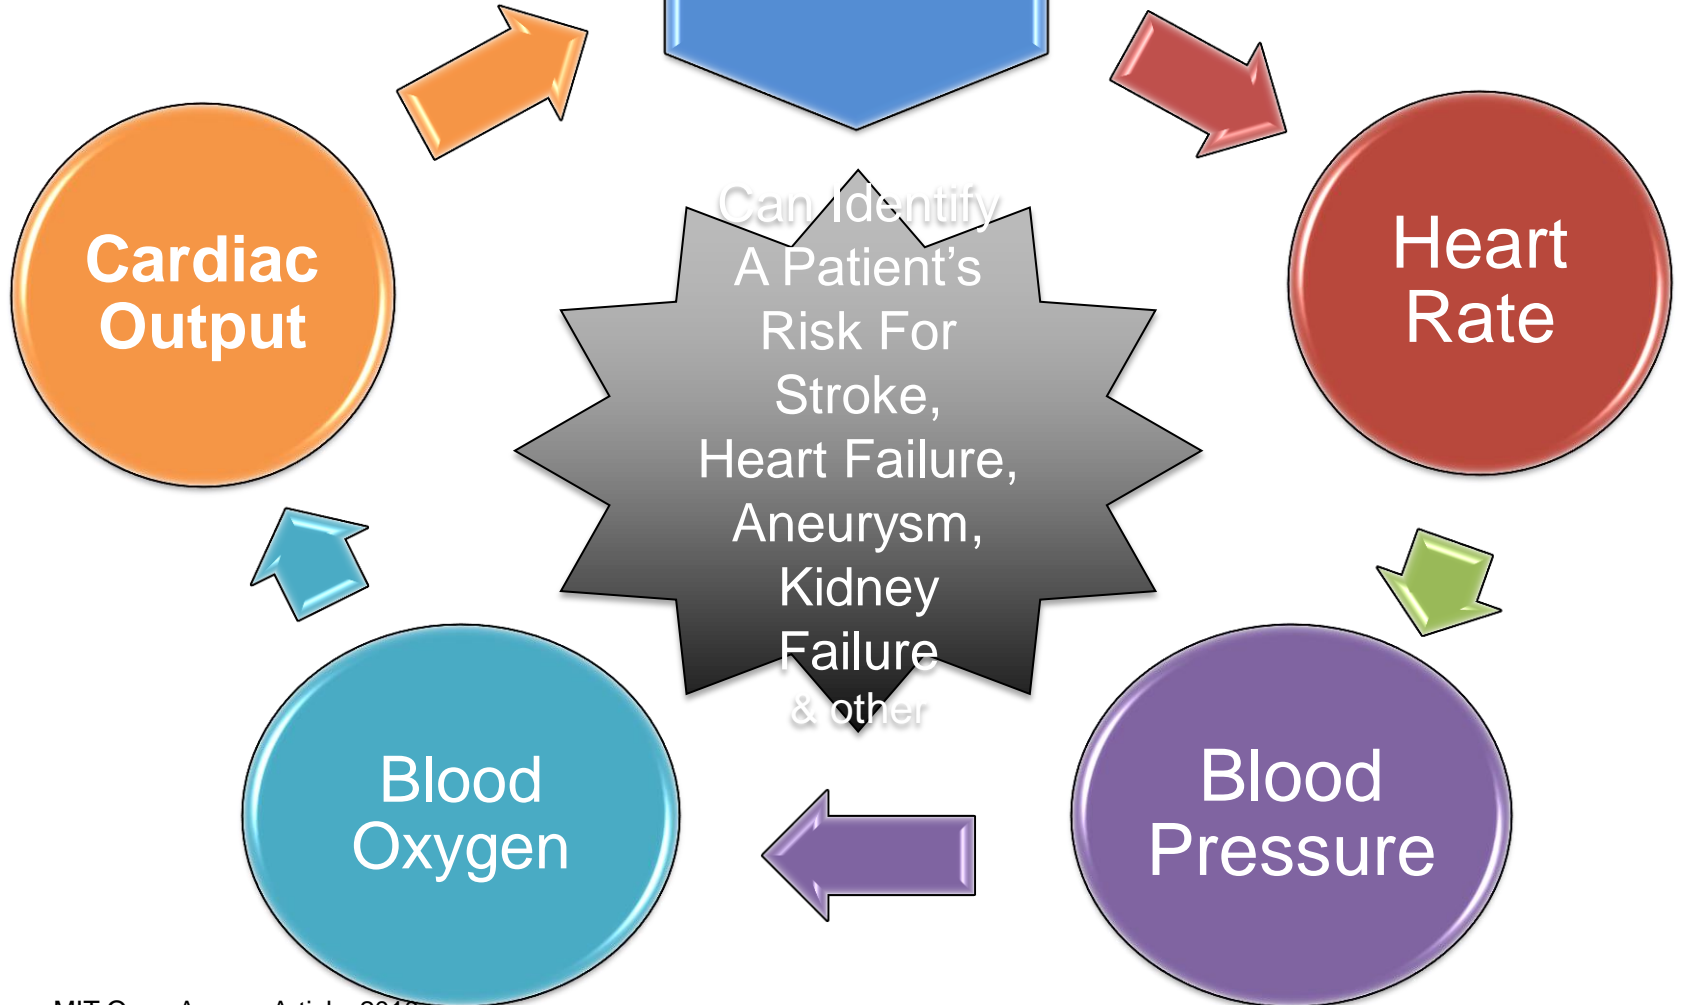

health monitor iOS/android app

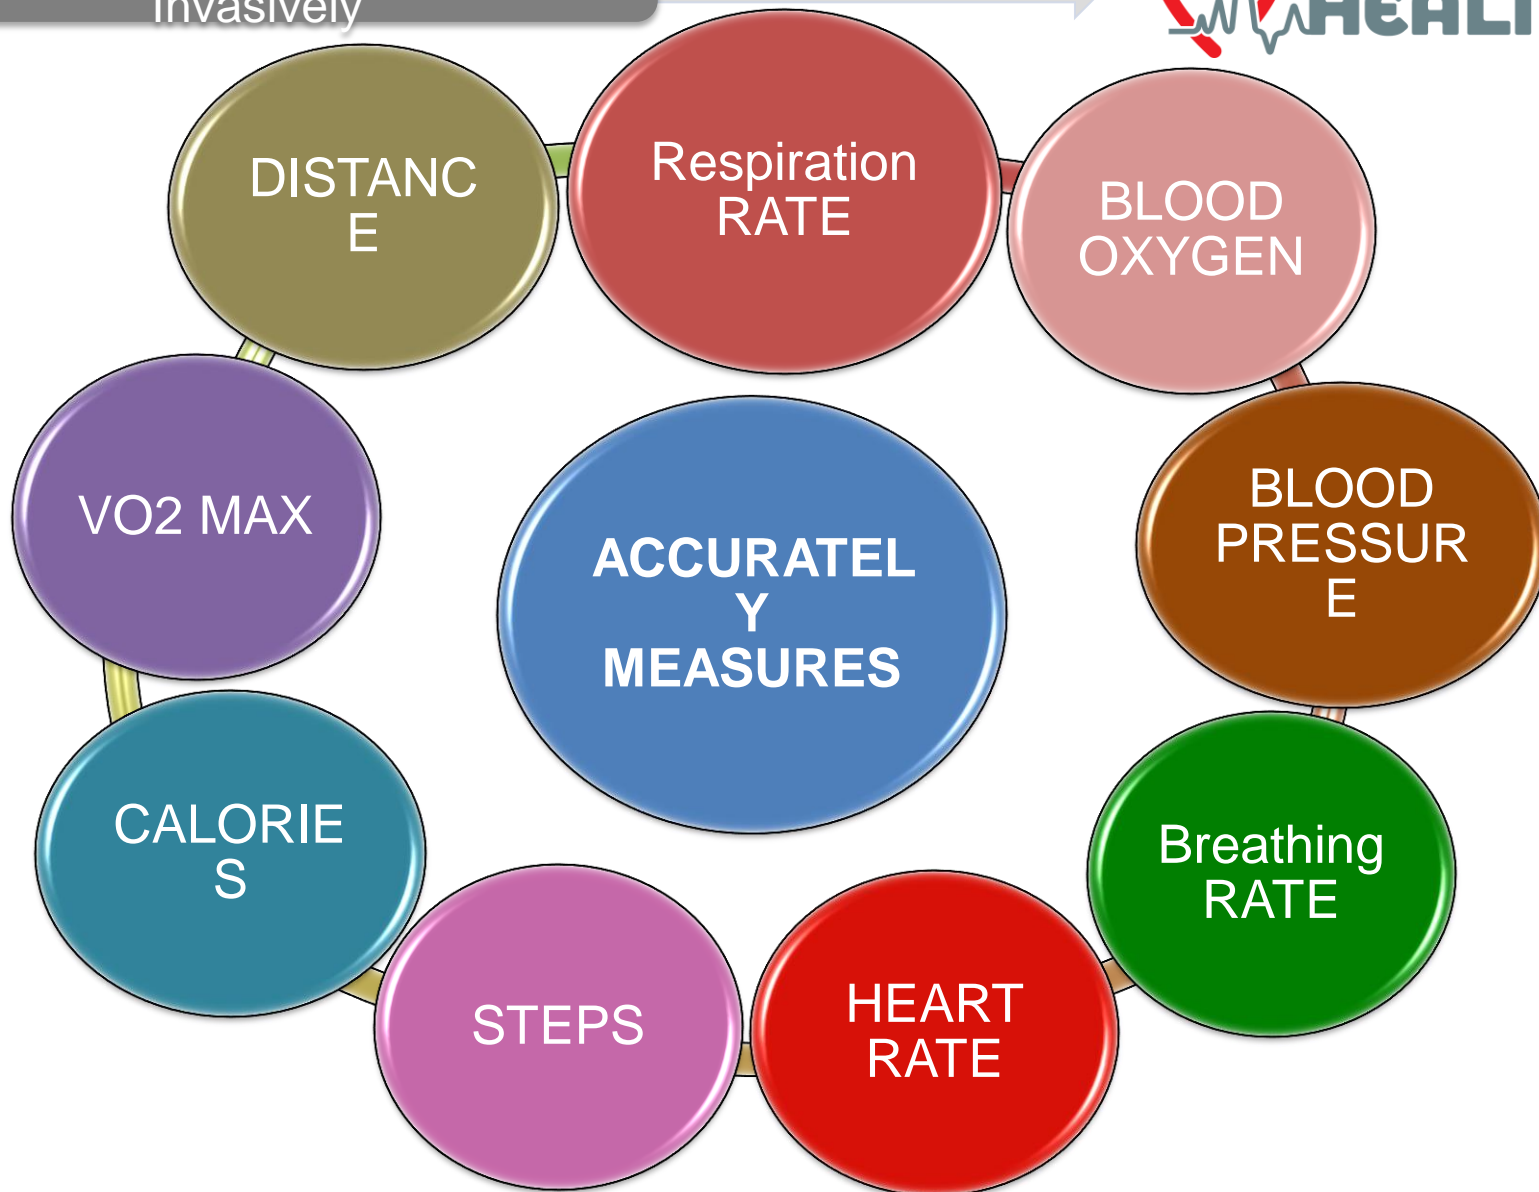

Massachusetts Institute of Technology

Continuous Monitoring Of:

Easily Monitor Your Health & Wellness Effortlessly And Non-Invasively

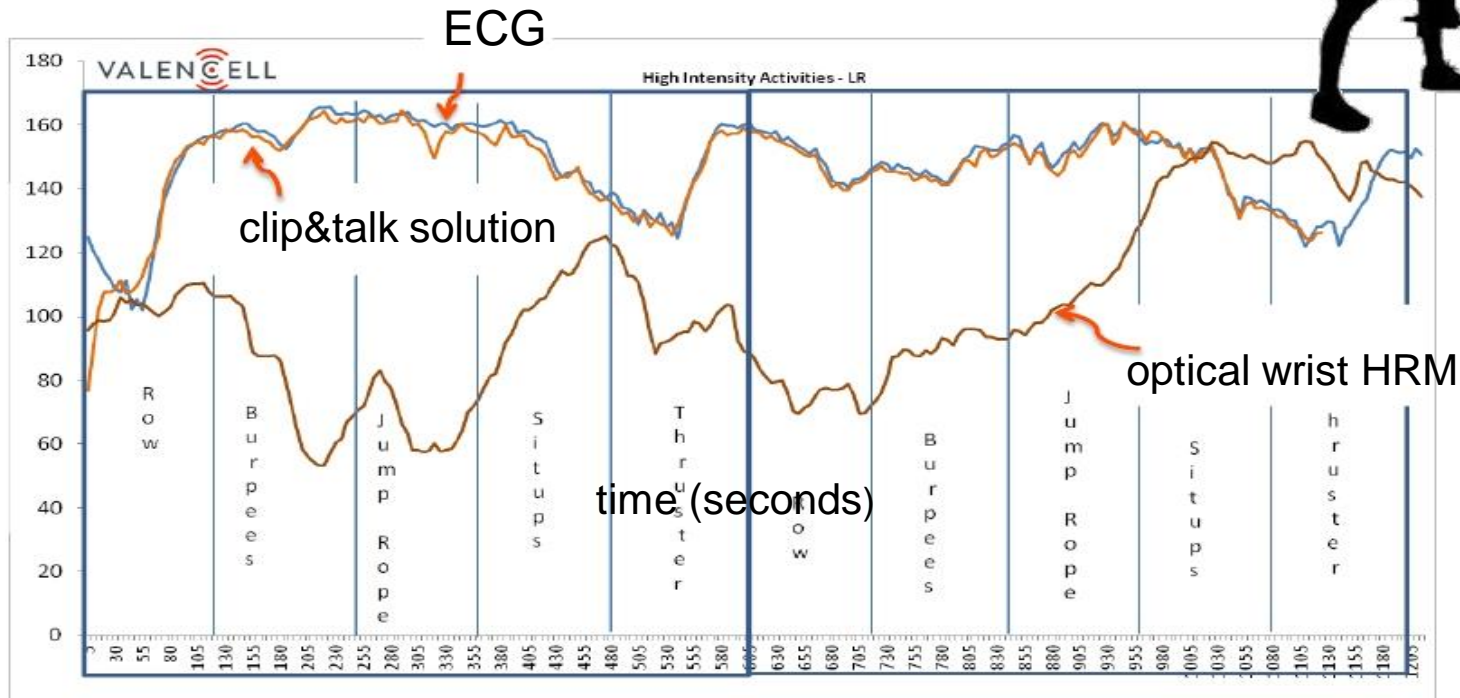

What about accuracy of clip&talk Health?

In "Clinical Studies" "The Ear" is the best part of the body for Wearable Vital Signs Monitoring*

*"Wrist monitors/smart watches have limitations and low accuracy levels"**

CLINICAL VALIDATION

Wearable & Hearable

Clinically Validated by some of
the world's leading
Biometric Researchers

**NC STATE
UNIVERSITY**

HOW WE MONITOR HEALTH AND WELLNESS

1-clip&talk collects Vital Biometric Data
Every time user places clip&talk in his/her
ear:

- talks, listens to music, or uses other multimedia apps simultaneously

2-Engages user in a
brief but critical daily
questionnaire

- 15-30 seconds

3-Sends notifications
if potential medical
issue detected

a **revolution**
